

Website Traffic Analysis

1. Objective

The objective of this analysis is to evaluate website traffic patterns across different events, dates, countries, cities, and content using the traffic dataset.

2. Key Performance Indicators

- Total Events: 226,278
- Total Pageviews: 142,015
- Total Clicks: 55,732
- Total Previews: 28,531
- Average Daily Traffic: 32,325 events
- Highest-Traffic Country: Saudi Arabia - 47,334 events
- Highest-Traffic Identified City: Jeddah - 22,791 events
- Most Active Content: "Jalebi Baby" by Teshar - 40,841 events

3. Key Findings

- Pageviews were the most common event, accounting for 142,015 events.
- Saudi Arabia recorded the highest traffic, followed by India and the United States.
- Jeddah and Riyadh were the highest-traffic identified cities in the dataset.
- "Jalebi Baby" by Teshar was the most active content link, with 40,841 events.
- Daily traffic remained relatively consistent during the seven-day period, with some fluctuations.
- The dataset contained missing values, with 7,121 missing ISRC values being the largest missing-value count.
- The event distribution showed that pageviews formed the largest share of overall website activity.

4. Traffic Trend

The daily traffic analysis shows fluctuations throughout the seven-day period from 19 August 2021 to 25 August 2021. The highest daily traffic was recorded on 19 August with 35,361 events, while the lowest was recorded on 23 August with 29,808 events. Overall, traffic remained relatively consistent during the period.

5. Three Tactical Improvements

1. Promote high-performing content: Analyze popular content such as "Jalebi Baby" to understand audience interest and use successful content patterns for future promotions.
2. Focus on high-traffic markets: Consider targeted campaigns and localized content for high-traffic markets such as Saudi Arabia and India.
3. Improve data quality: Strengthen data collection and validation processes to reduce missing values, particularly the 7,121 missing ISRC records, and improve the accuracy of future analysis.

6. Conclusion

The Website Traffic Analysis provides an overview of website activity across events, dates, countries, cities, and content. Pageviews represented the largest share of activity, while Saudi Arabia and India were major sources of traffic. Popular content such as “Jalebi Baby” also generated a high number of events. These findings can support decisions related to content promotion, market targeting, audience engagement, and data quality improvement.
